

Test 1

00	public class Sei {
01	char f() { return '6'; }
02	public static void main(String e[]) {
03	Sei a = new Sei();
04	Sei b = new Sette();
05	Sette c = new Sette();
06	System.out.print(a.f() + " " + b.f() + " " + c.f() + "
07	");
08	char ch[] = {'A', 'B', 'A', 'B', 'A', 'B'};
09	int i1 = 0, i2 = 2, i3 = 4;
10	if (a.equals(b)) i1++;
11	if (b.equals(a)) i2++;
12	if (c.equals(b)) i3++;
13	System.out.println(ch[i1] + " " + ch[i2] + " " +
14	ch[i3]);
15	}
16	class Sette extends Sei {
17	char f() { return '7'; }
18	public boolean equals(Object a) {
19	return (a instanceof Sei);
20	}

Test 2

00	public class Uno {
01	static Collection c=new HashSet();
02	public static void main(String a[]) {
03	Collection c=new LinkedList();
04	Uno u=new Uno();
05	c.add(u); c.add(u);
06	u.f();
07	System.gc();System.runFinalization();
08	System.out.println(c.size());
09	}
10	void f() {
11	A a=new A("K");
12	A b=new A("L");
13	c.add(b);
14	}
15	class A {
16	String s="";
17	A(String s) {this.s=s; System.out.print(this);}
18	public String toString(){return s;}
19	public void finalize(){System.out.print(this);}
20	}

### Test 3

```
01 public class Due {  
02     static Collection<Due> s=new HashSet<Due>();  
03     int k,j;  
04     Due(int k, int j) {this.k=k;    this.j=j;}  
05     public boolean equals(Object d){  
06         return k-j==((Due)d).j-((Due)d).k;  
07     }  
08     public int hashCode(){return 1;}  
09     public static void main(String[] m){  
10         s.add(new Due(1,2)); s.add(new Due(0,1));

12         System.out.print(s.size());  
13         for (Due x:s){System.out.print(x.k+" "+x.j);}  
14     }  
15     public static void main(String m){  
16         s.add(new Due(1,0));  
17         System.out.print(s.size());  
18     } }
```

### Test 4

```
01 public class Due {  
02     static Collection<Due> s=new HashSet<Due>();  
03     static int k,j;  
04     Due(int k, int j) {this.k=k;    this.j=j;}  
05     public boolean equals(Object d){  
06         return k-j==((Due)d).j-((Due)d).k;  
07     }  
08     public int hashCode(){return 1;}  
09     public static void main(String[] m){  
10         s.add(new Due(1,2)); s.add(new Due(0,1));  
11         s.add(new Due(2,1)); s.add(new Due(1,0));  
12         System.out.print(s.size());  
13         for (Due x:s){System.out.print(x.k+" "+x.j);}  
14     } }
```

### Test 5

```
01 public class Due {  
02     Collection<Due> s=new HashSet<Due>();  
03     static int k,j;  
04     Due(int k, int j) {this.k=k;    this.j=j;}  
05     public boolean equals(Object d){  
06         return k-j==((Due)d).j-((Due)d).k;  
07     }  
08     public int hashCode(){return 1;}  
09     public static void main(String[] m){  
10         s.add(new Due(1,2)); s.add(new Due(0,1));  
11         s.add(new Due(2,1)); s.add(new Due(1,0));  
12         System.out.print(s.size());  
13         for (Due x:s){System.out.print(x.k+" "+x.j);}  
14     } }
```

Test 6

```
00 public class Tre {  
01     class A {  
02         public A(int k) {System.out.print(k);}  
03         public void finalize() {System.out.print("A");}  
04     }  
05     class B extends A {  
06         public B(int k) {System.out.print(k);}  
07         public void finalize() {System.out.print("A");}  
08     }  
09     public static void main (String z[]){  
10         new Tre();  
11     }  
12     Tre(){  
13         A a=new B(3);  
14         B b=(B)a;  
15         a=null;  
16         b=new B(3);  
17         System.gc(); System.runFinalization();  
18     } }
```

Test 7

```
01 #include <iostream>  
02 using namespace std;  
03 int x[] = {-2, -1, 0, 1, 2};  
04 void f(int* x, int y[]) {  
05     x[*y] = -y[*x];  
06 }
