

Grafica e non solo: Java FX

Stage/Scene/Parent/Node

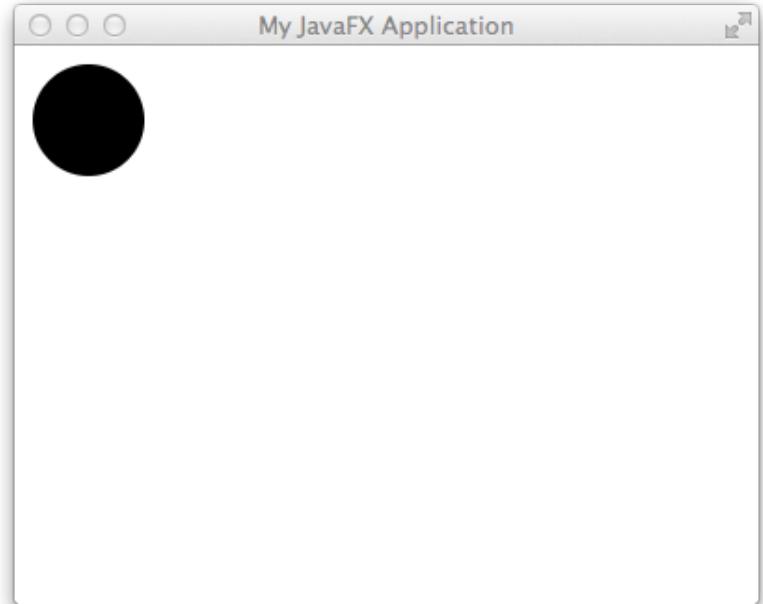

Finestra == Stage

- Uno Stage contiene una Scene
- Una Scene ha un Parent
- Un Parent è un Node

Applicazione minima

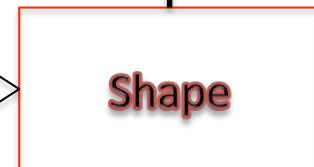

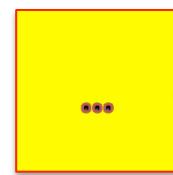

```
package it.unitn.disi.javafxapplication;
import javafx.application.Application;
import javafx.scene.Group;
import javafx.scene.Scene;
import javafx.scene.shape.Circle;
import javafx.stage.Stage;
public class MinimalApp extends Application {
    public void start(Stage stage) {
        Circle circ = new Circle(40, 40, 30);
        Group root = new Group(circ);
        Scene scene = new Scene(root, 400, 300);
        stage.setTitle("My JavaFX Application");
        stage.setScene(scene);
        stage.show();
    }
    public static void main(String[] args) {
        Application.launch(args);
    }
}
```

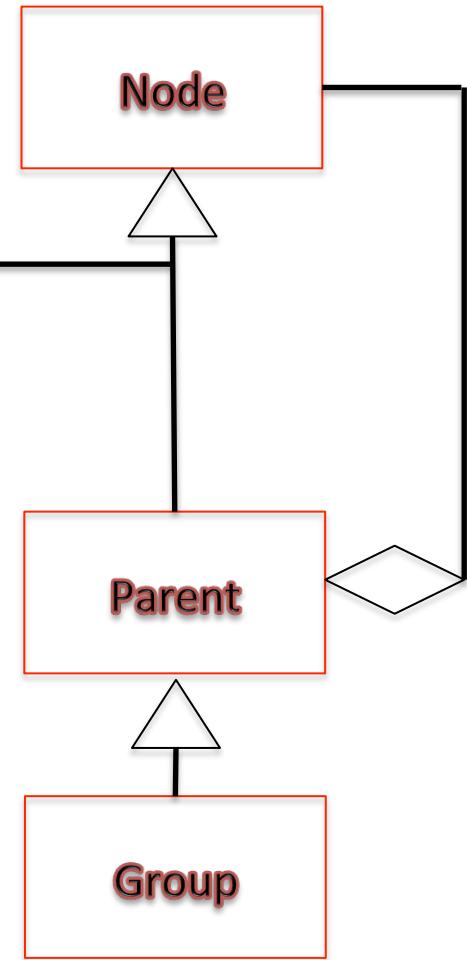

Shape hierarchy

Shape

- Line
- Polyline
- Polygon
- Rectangle
- Arc
- Circle
- Ellipse
- QuadCurve
- CubicCurve
- Text
- SVGPath
- Path composto di PathElement (ArcTo...)

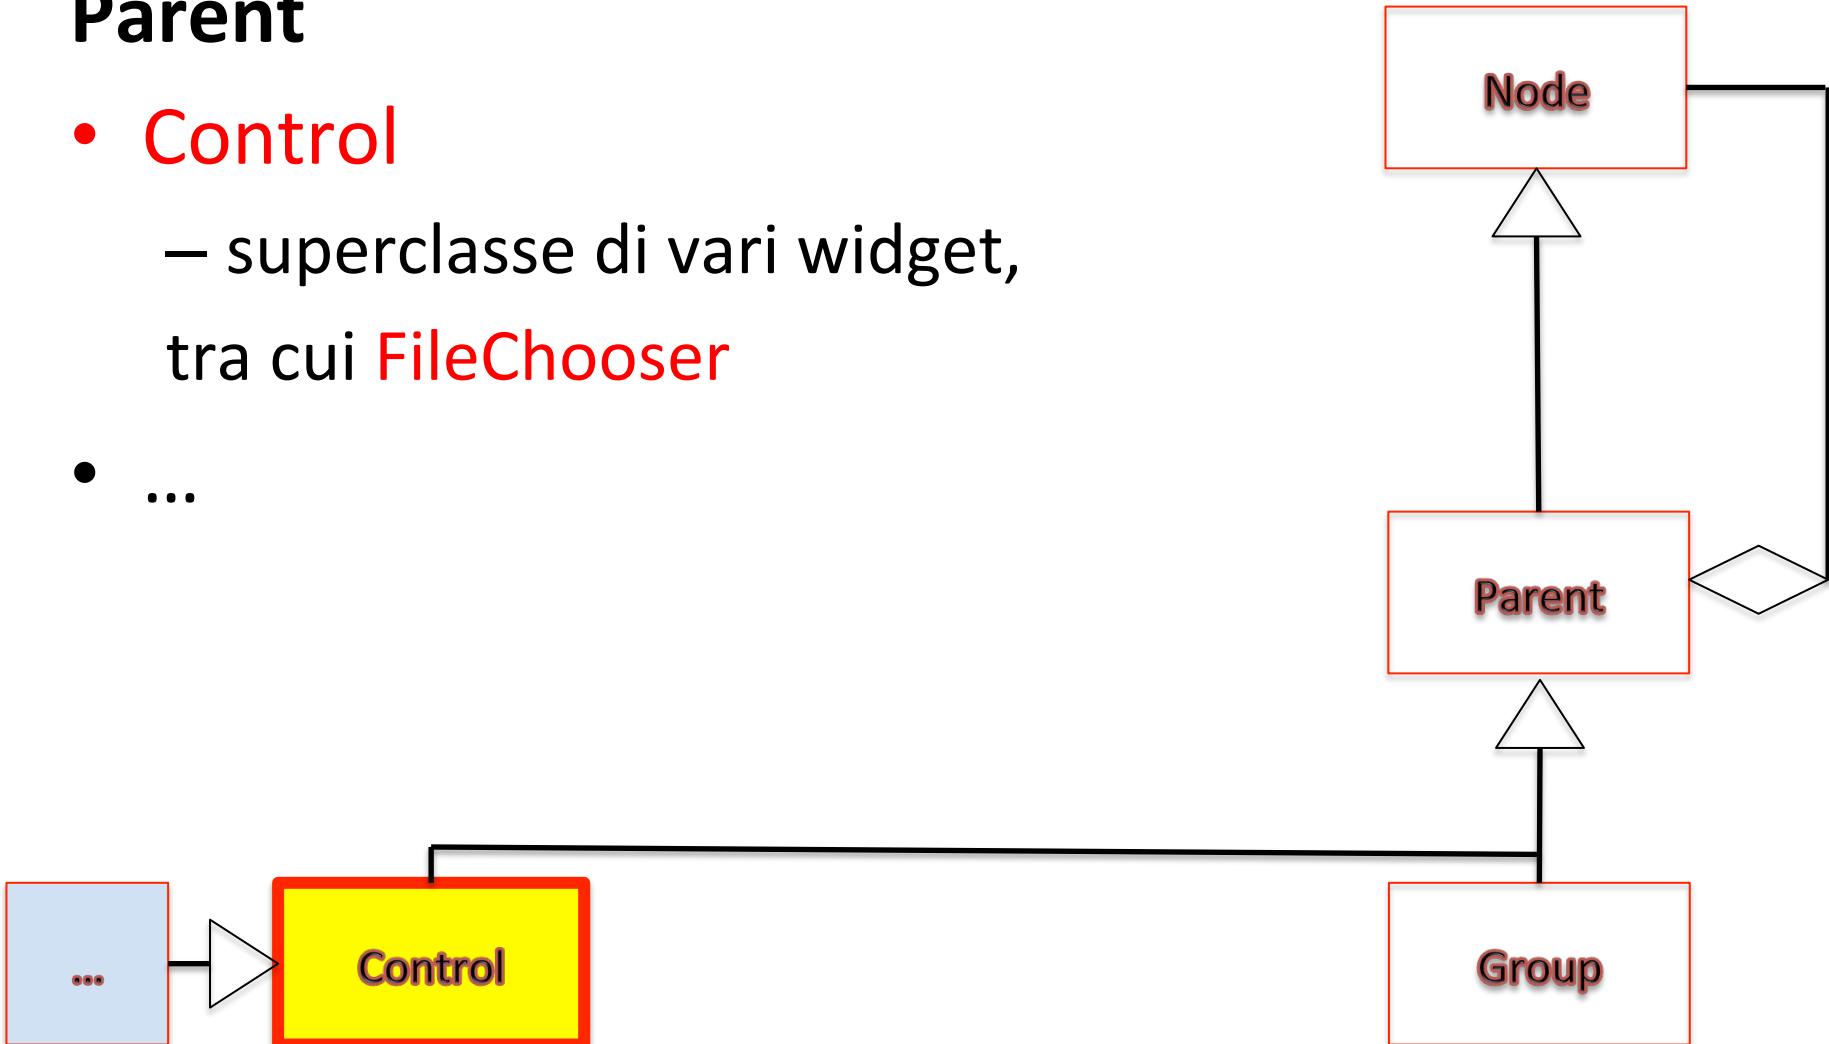

Giocateci!

Parent hierarchy (partial)

Parent

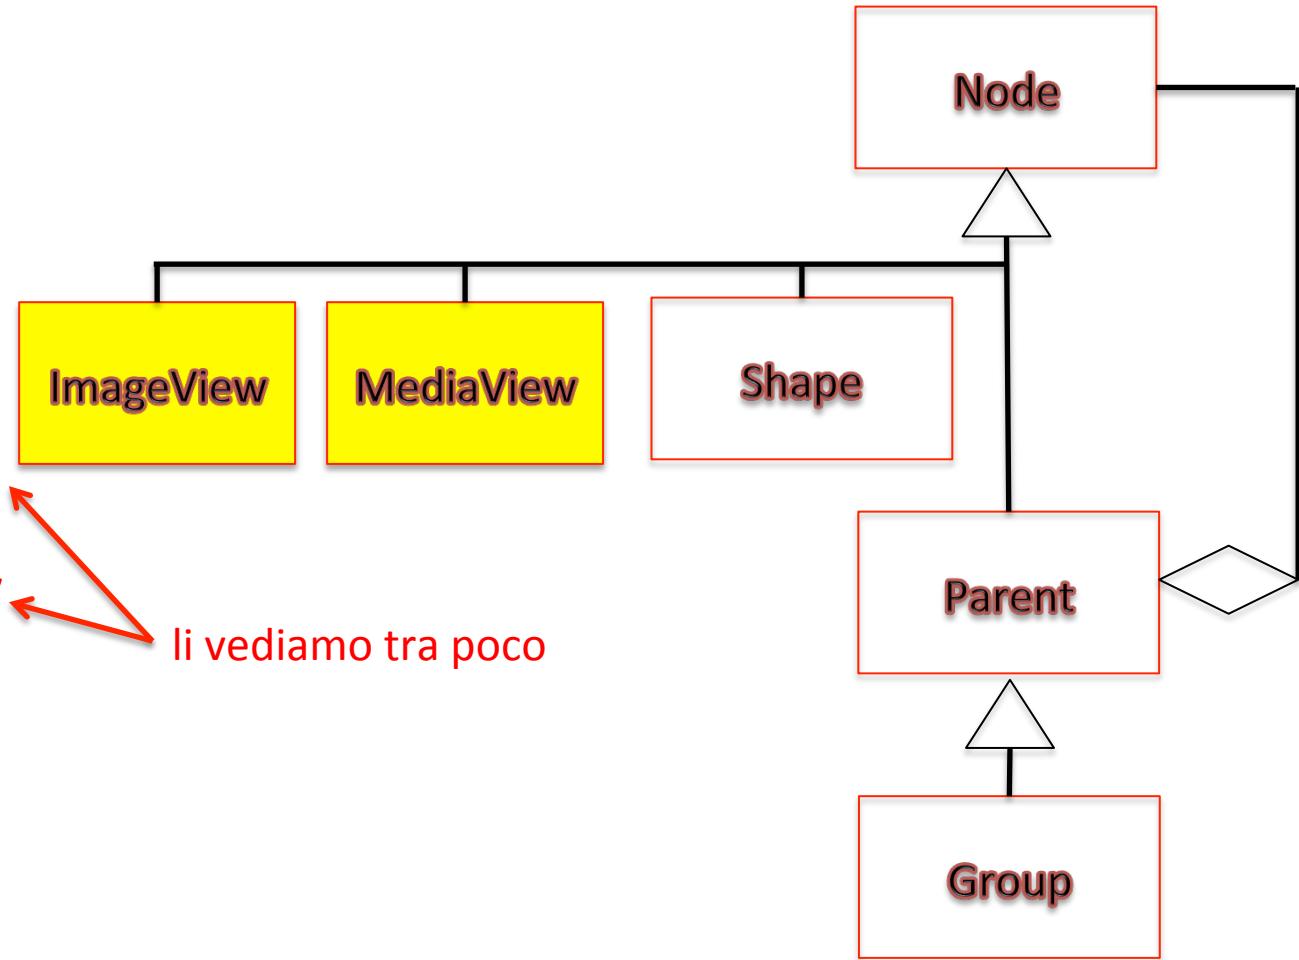

- Control
 - superclasse di vari widget,
tra cui **FileChooser**
- ...

Node hierarchy (partial)

Node

- Parent
- Shape
- ImageView
- MediaView

ImageView - Image

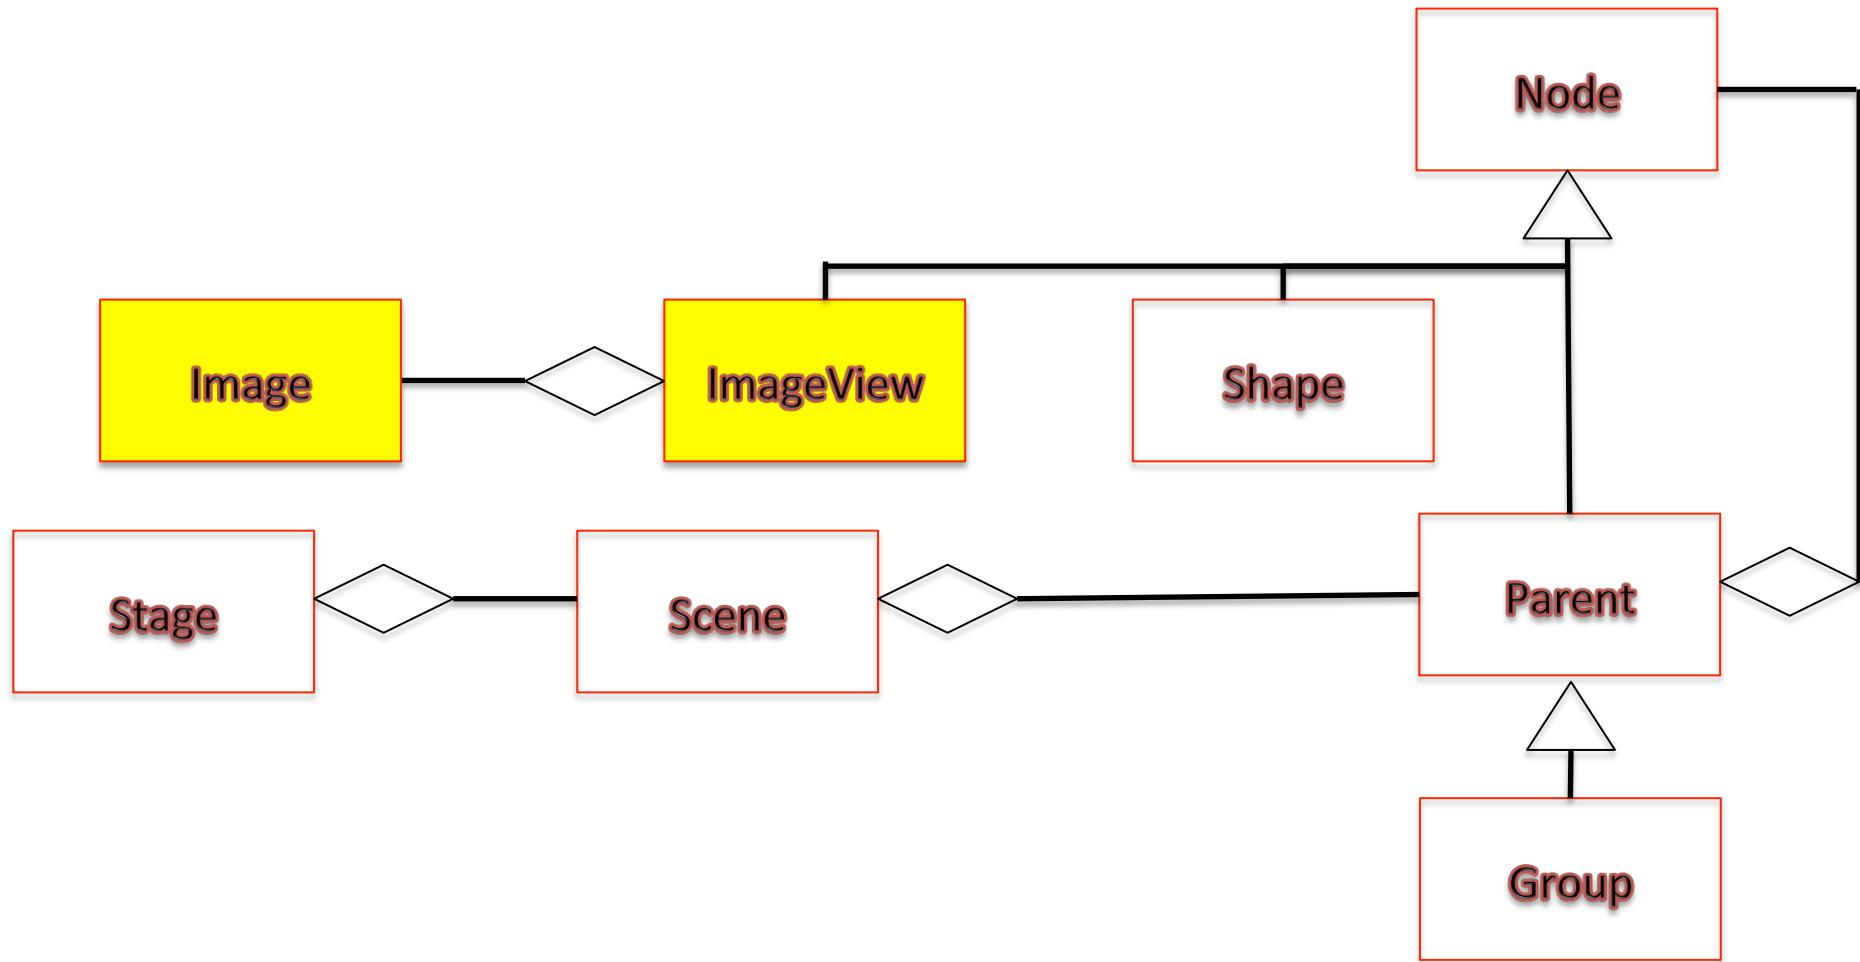

Image and File

```
public class FilesAndImages extends Application {  
    public void start(Stage stage) {  
        FileChooser fileChooser = new FileChooser();  
        fileChooser.setTitle("Carica un'immagine");  
        fileChooser.getExtensionFilters().addAll(  
            new FileChooser.ExtensionFilter("JPG", "*.jpg"),  
            new FileChooser.ExtensionFilter("PNG", "*.png")  
        );  
        String url = System.getProperty("user.home");  
        File f=new File(url);  
        fileChooser.setInitialDirectory(f); // bugged on MacOsX  
        File file = fileChooser.showOpenDialog(stage);  
        if (file == null) {  
            System.out.println("No file chosen");  
            System.exit(1);  
        }  
    }  
}
```

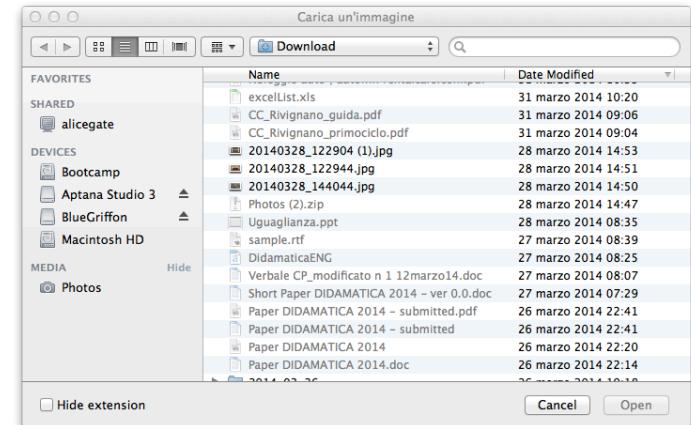

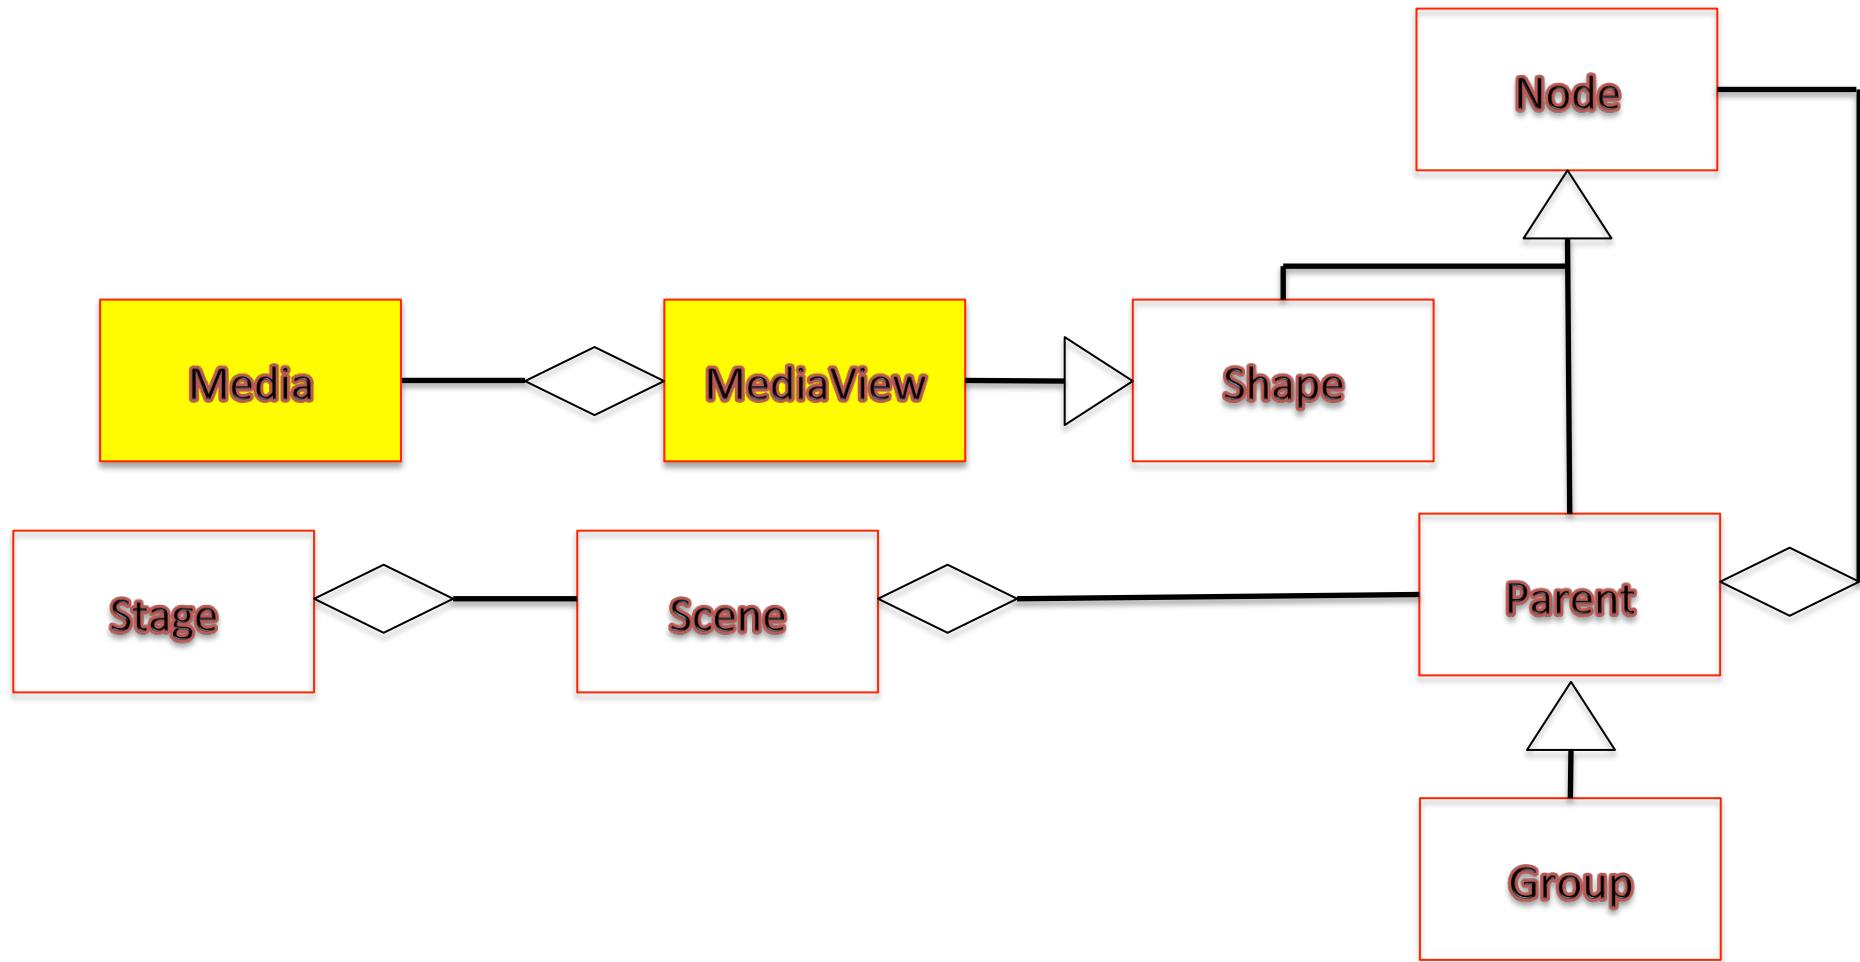

Image and File

```
Image image = new Image("file://" +
    file.getAbsolutePath(), 500, 500, true, true);
ImageView iw = new ImageView(image);
Group root = new Group(iw);
Scene scene = new Scene(root, 500, 500);
stage.setTitle(file.getName());
stage.setScene(scene);
stage.sizeToScene();
stage.show();
}

public static void main(String[] args) {
    Application.launch(args);
}
}
```

MediaView - Media

```

public class Sounds extends Application{
    public void start(Stage stage) {
        Media media = new Media("http://www.ferraraterraeacqua.it/
it/audioguide/audioguide-di-ferrara-citta-del-rinascimento/
01_benvenuto-a-ferrara.mp3");
        MediaPlayer mediaPlayer = new MediaPlayer(media);
        mediaPlayer.setAutoPlay(true);
        // create mediaView and add media player to the viewer
        MediaView mediaView = new MediaView(mediaPlayer);
        Group root = new Group(mediaView);
        root.getChildren().add(
            new Text(10, 30,"Benvenuto a Ferrara"));
        Scene scene = new Scene(root, 150, 60);
        stage.setScene(scene);
        stage.sizeToScene();
        stage.show();
    }
    public static void main(String[] args) {
        Application.launch(args);
    }
}

```

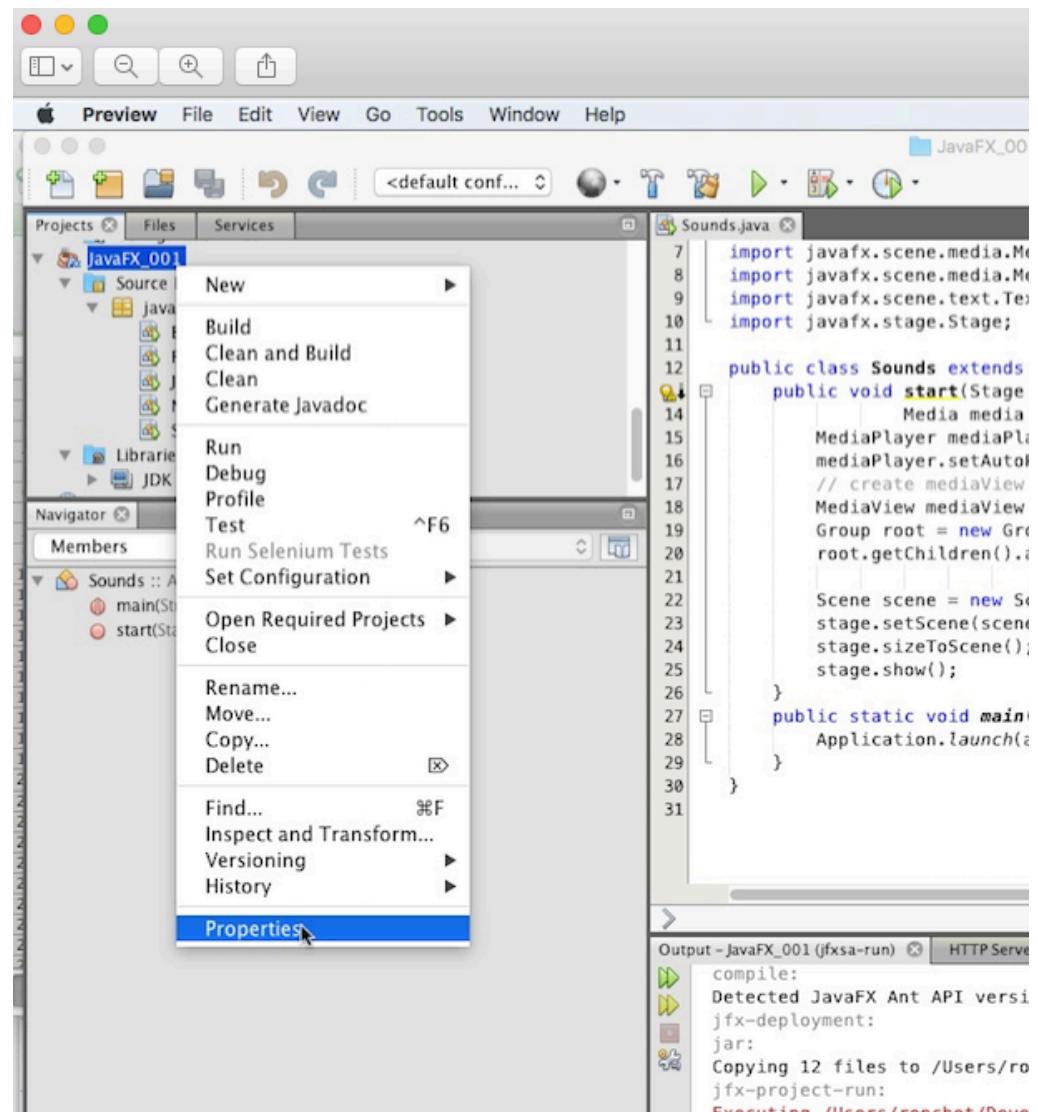

MediaView

<http://docs.oracle.com/javafx/2/media/overview.htm>

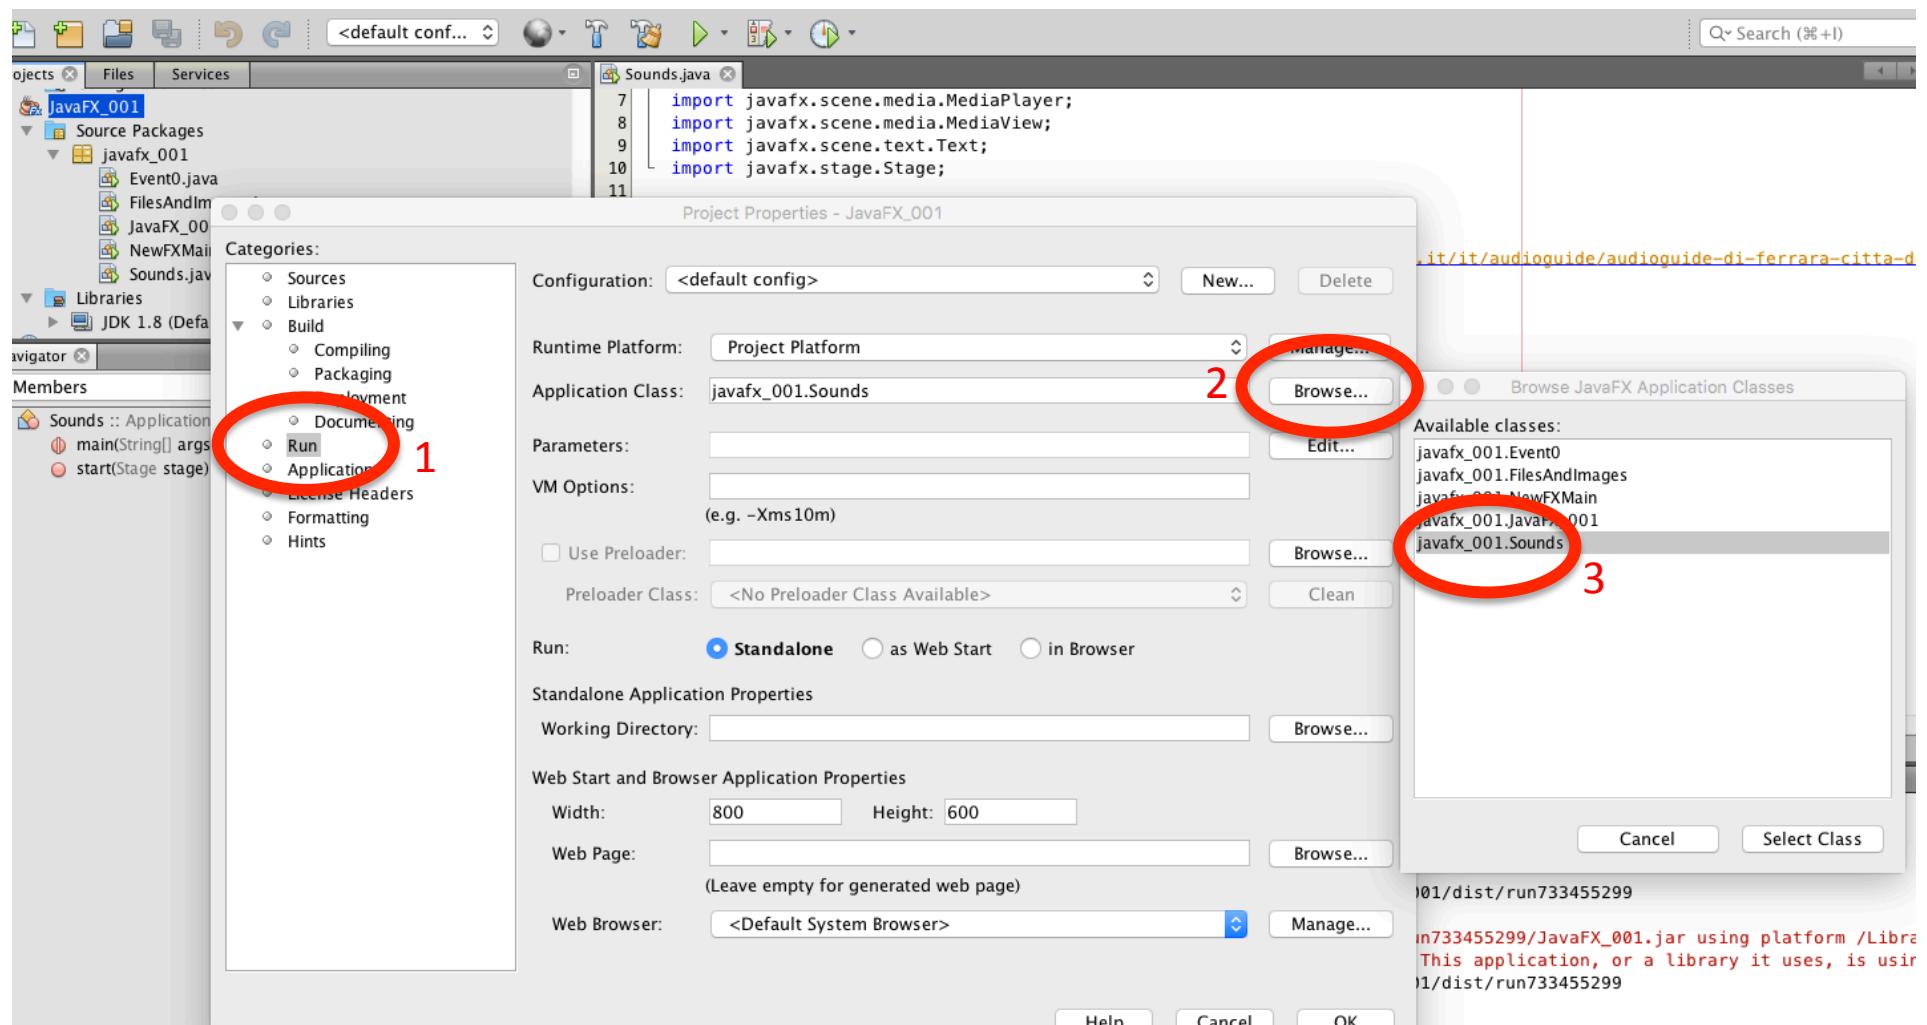

Crea un programma distribuibile - 1

Go to Project Properties
(right click on the project)

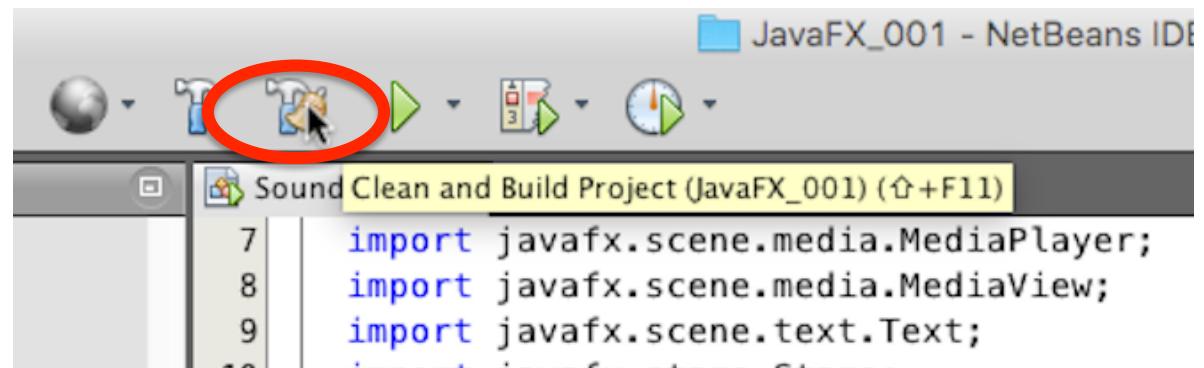

Crea un programma distribuibile – 2

Scegli “run” e seleziona la classe con il main che ti interessa

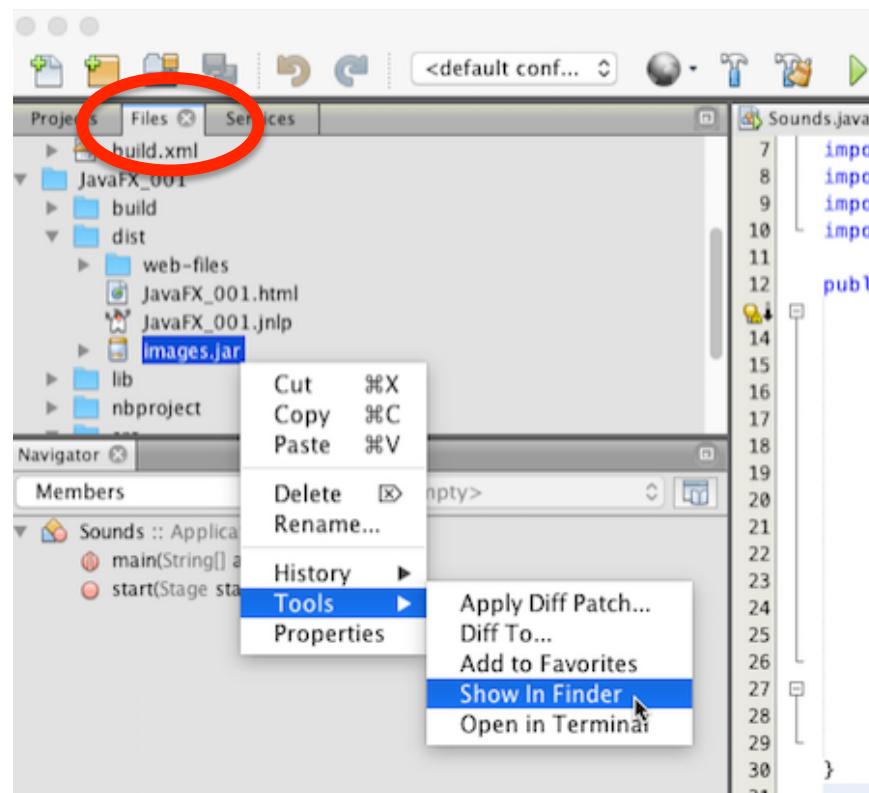

Crea un programma distribuibile - 3

Clean and build project

Go to the Files Tab,
Select the .jar file,
Right click on it,
Choose Tools -> Show in Finder.

Double clicking on the file
You will start the process.

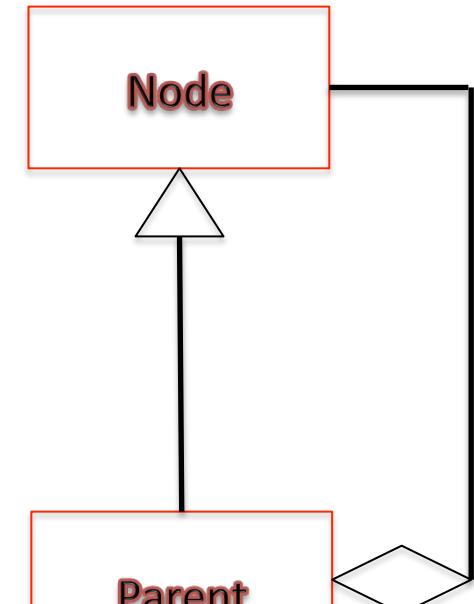

Parent hierarchy

Parent

- **Control**
 - superclasse di vari widget,
tra cui **FileChooser** (lo vediamo tra poco)
- **Group**
- **Region**

A Region is an area of the screen that can contain other nodes
- **WebView** WebView is a Node that manages a WebEngine and displays its content.

JavaFX UI Controls

Controls

Button:

ToggleButton:

Hyperlink:

Hello I am a hyperlink I can have an icon too

CheckBox:

Normal/Undefined/Selected Hit me dude Are you sure There you go

Radio Button:

Bye Hello

Menu Buttons:

ScrollView:

ProgressBar:

ProgressIndicator
Indeterminate:

ListView:

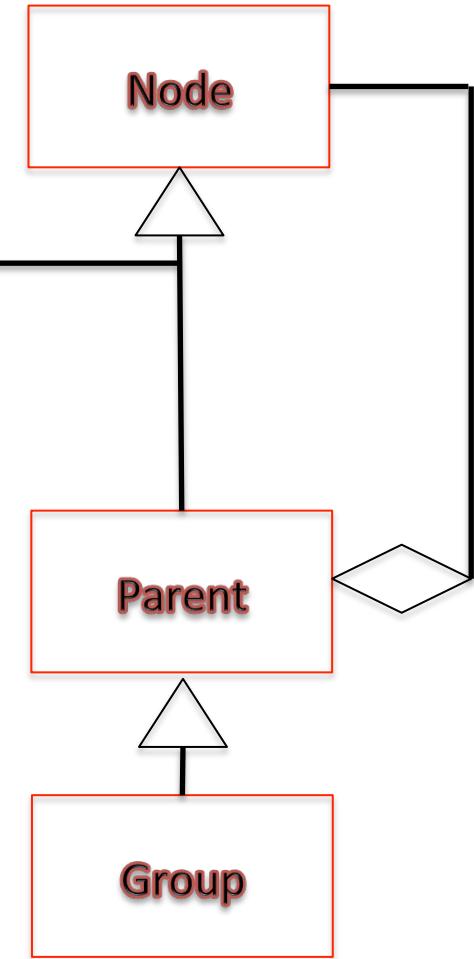

Node hierarchy

Node

- Parent
- Shape
- ImageView
- MediaView
- Canvas

li vediamo tra poco

Canvas

Una "tela del pittore" con un metodo per ottenere il suo **GraphicContext** che ha varie primitive per disegnarci sopra:

- `fillArc()`
- `fillRect()`
- `drawImage()`
- ...

<http://docs.oracle.com/javafx/2/canvas/jfxpub-canvas.htm>

Gestione di base degli eventi

Basic Events

```
public class Event0 extends Application {  
    public void start(Stage stage) {  
        Button btn = new Button();  
        btn.setText("Click me");  
        Listener a=new Listener();  
        btn.addEventHandler(Event.ANY, a);  
        Group root = new Group(btn);  
        Scene scene = new Scene(root, 300, 250);  
        stage.setScene(scene);  
        stage.sizeToScene();  
        stage.show();    }  
  
    public static void main(String[] args){  
        Application.launch(args);    }  
}  
  
class Listener implements EventHandler{  
    int counter=0;  
    public void handle(Event t) {  
        System.out.println(++counter+" Ricevuto un evento di tipo "  
            +t.getEventType());    } }
```

- 1 Ricevuto un evento di tipo INPUT_METHOD_TEXT_CHANGED
- 2 Ricevuto un evento di tipo MOUSE_ENTERED
- 3 Ricevuto un evento di tipo MOUSE_ENTERED_TARGET
- 4 Ricevuto un evento di tipo MOUSE_MOVED
- ...
- 12 Ricevuto un evento di tipo MOUSE_MOVED
- 13 Ricevuto un evento di tipo MOUSE_PRESSED
- 14 Ricevuto un evento di tipo ACTION
- 15 Ricevuto un evento di tipo MOUSE_RELEASED
- 16 Ricevuto un evento di tipo MOUSE_CLICKED
- 17 Ricevuto un evento di tipo MOUSE_MOVED

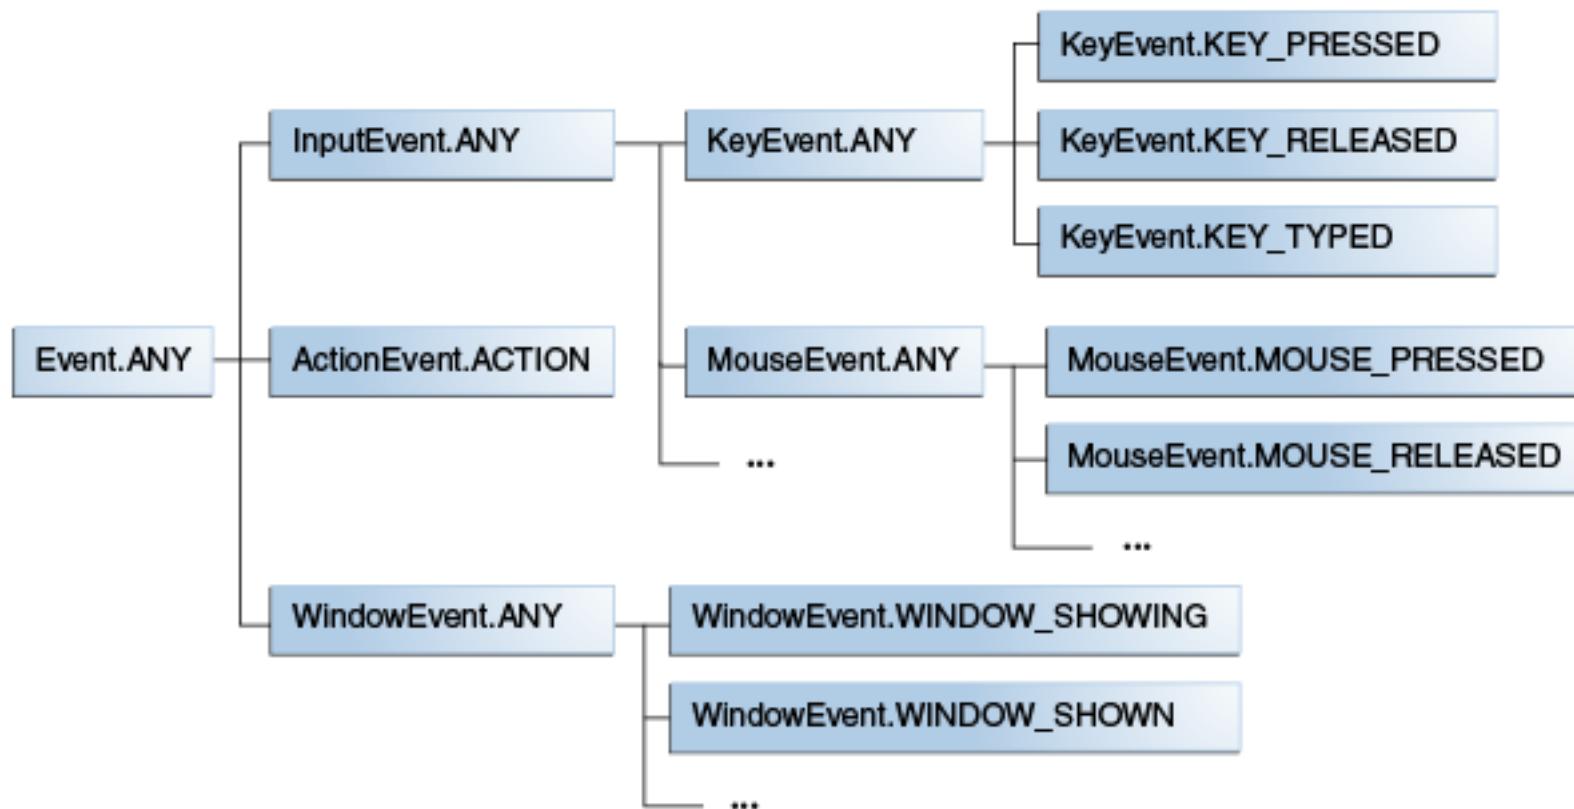

1 Ricevuto un evento di tipo ACTION

Basic Events

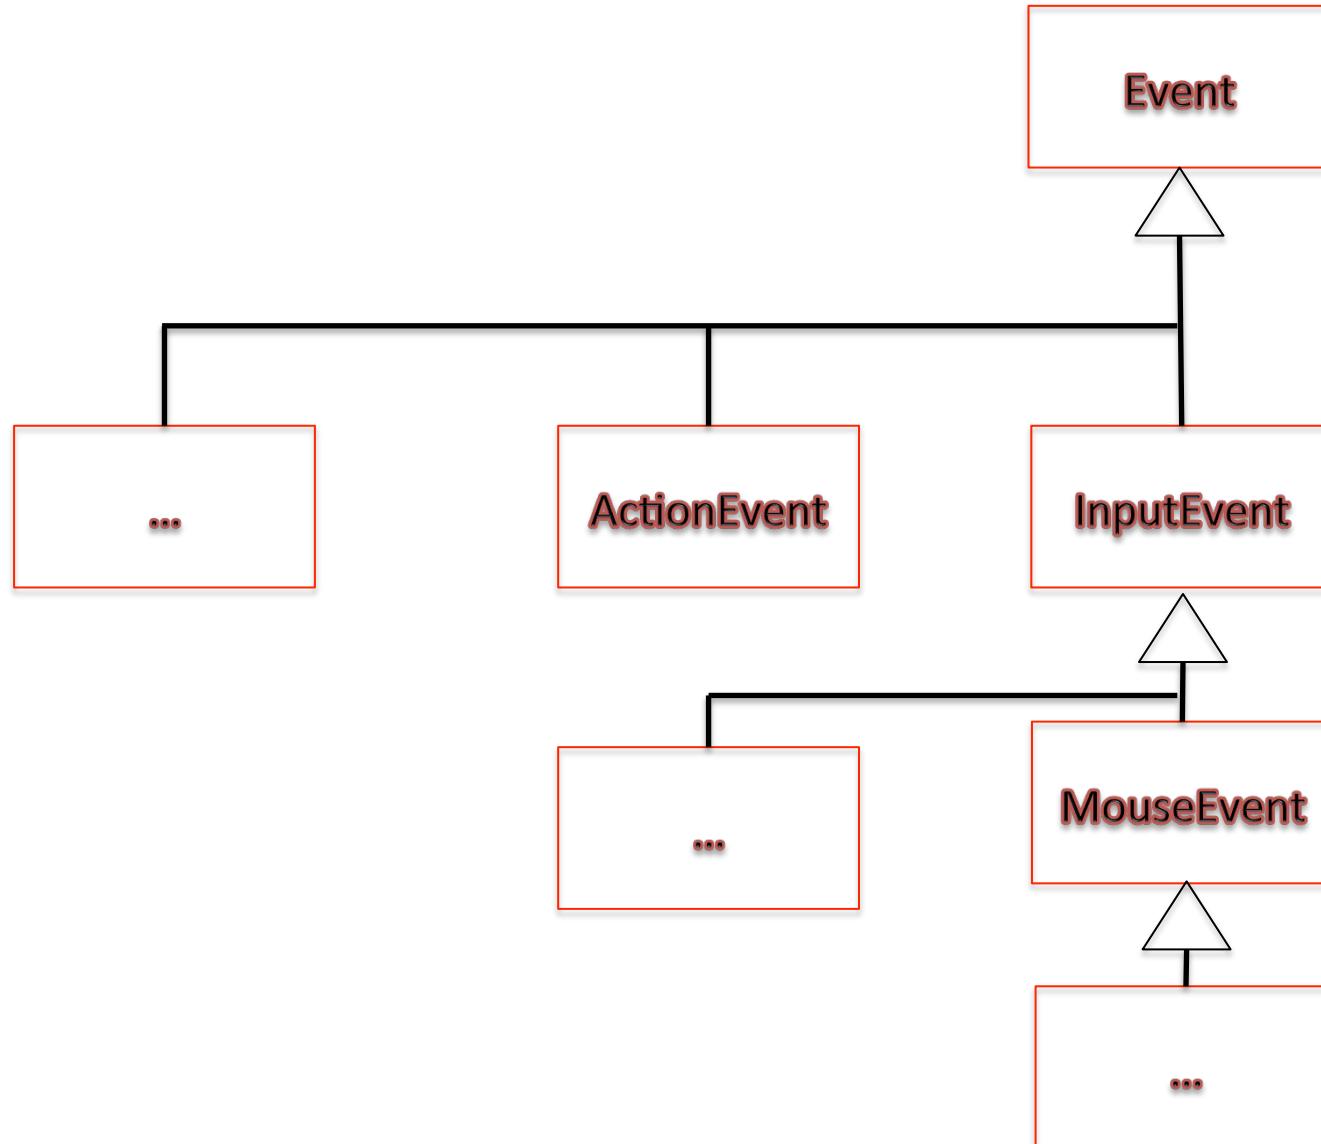

```
public class Event0 extends Application {  
    public void start(Stage stage) {  
        Button btn = new Button();  
        btn.setText("Click me");  
        Listener a=new Listener();  
        btn.addEventHandler(ActionEvent.ACTION, a);  
        Group root = new Group(btn);  
        Scene scene = new Scene(root, 300, 250);  
        stage.setScene(scene);  
        stage.sizeToScene();  
        stage.show();    }  
    public static void main(String[] args){  
        Application.launch(args);    }  
}  
  
class Listener implements EventHandler{  
    int counter=0;  
    public void handle(Event t) {  
        System.out.println(++counter+" Ricevuto un evento di tipo "  
            +t.getEventType());    } }
```

Event hierarchy

Event

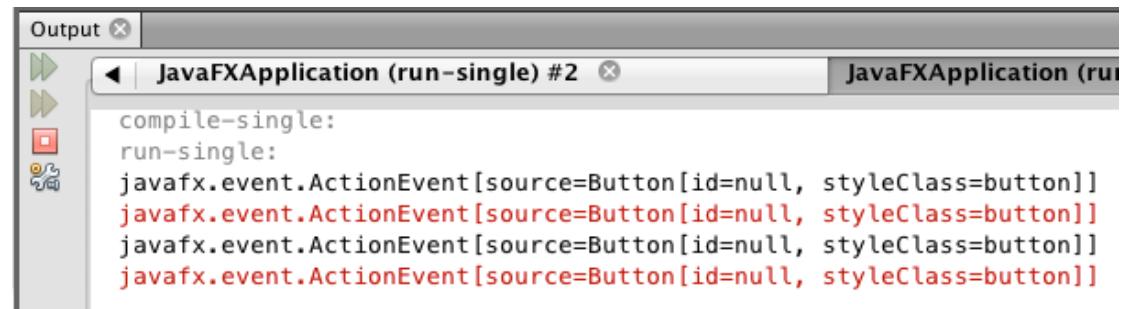

MultiListener

```
public class Event0 extends Application {  
    public void start(Stage stage) {  
        Button btn = new Button();  
        btn.setText("Click me");  
        Olistener o=new OListener();  
        Elistener e=new EListener();  
        btn.addEventHandler(ActionEvent.ACTION, o);  
        btn.addEventHandler(ActionEvent.ACTION, e);  
        Group root = new Group(btn);  
        Scene scene = new Scene(root, 300, 250);  
        stage (scene);  
        stage ();  
    }  
    public static void main(String[] args){  
        Application.launch(args);  
    }  
}
```

```
class OListener  
    implements EventHandler{  
    public void handle(Event t) {  
        System.out.println(t);  
    }  
}
```

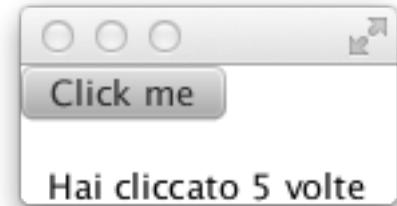

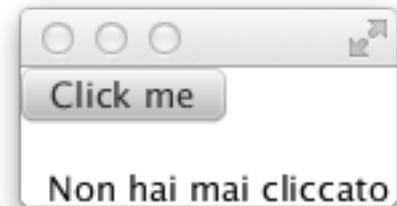

```
class EListener  
    implements EventHandler{  
    public void handle(Event t) {  
        System.err.println(t);  
    }  
}
```

Listener Esterno

```
public class AppWithEvents1 extends Application {  
    Text text=null;  
    public void start(Stage stage) {  
        text=new Text(10,50,"Non hai mai cliccato ");  
        Button btn = new Button();  
        btn.setText("Click me");  
        Listener a=new Listener(this);  
        btn.addEventHandler(ActionEvent.ACTION, a);  
        Group root = new Group(btn);  
        root.getChildren().add(text);  
        Scene scene = new Scene(root);  
        stage.setScene(scene);  
        stage.show();  
    }  
    public void updateText(int n){  
        text.setText("Hai cliccato "+n  
                    +" volte");  
    }  
    public static void main(String[] args) {  
        Application.launch(args);  
    }  
}
```

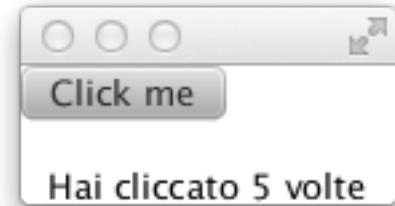

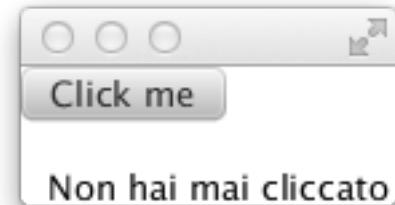

```
class Listener  
    implements EventHandler{  
    AppWithEvents1 awe=null;  
    int counter=0;  
    Listener(AppWithEvents1 a){  
        awe=a;  
    }  
    public void handle(Event t) {  
        awe.updateText(++counter);  
    }  
}
```

Listener Interno

```
public class AppWithEvents1 extends Application {  
    Text text=null;  
    public void start(Stage stage) {  
        text=new Text(10,50,"Non hai mai cliccato ");  
        Button btn = new Button();  
        btn.setText("Click me");  
        Listener a=new Listener(this);  
        btn.addEventHandler(ActionEvent.ACTION, a);  
        Group root = new Group(btn);  
        root.getChildren().add(text);  
        Scene scene = new Scene(root);  
        stage.setScene(scene);  
        stage.show();  
    }  
    public void updateText(int n){  
        text.setText("Hai cliccato "+n  
                    +" volte");  
    }  
    public static void main(String[] args) {  
        Application.launch(args);  
    }  
}
```

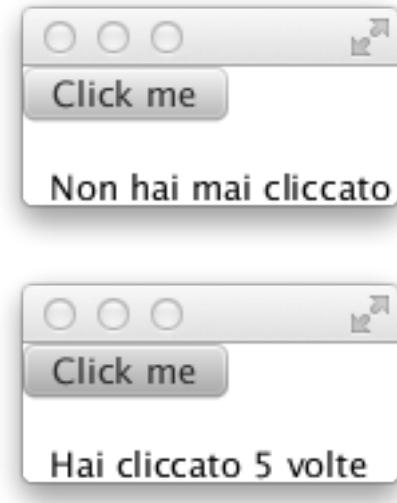

```
class Listener  
    implements EventHandler{  
    AppWithEvents1 awe=null;  
    int counter=0;  
    Listener(AppWithEvents1 a){  
        awe=a;  
    }  
    public void handle(Event t) {  
        awe.updateText(++counter);  
    }  
}
```

Listener Interno

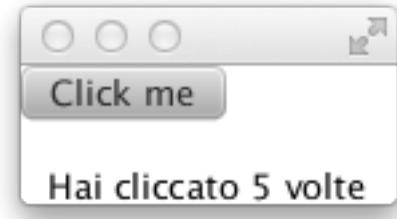

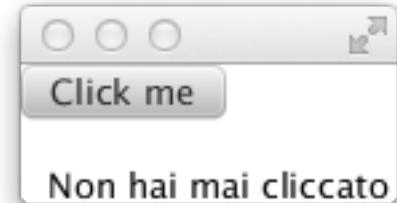

```
public class AppWithEvents1 extends Application {  
    Text text=null;  
    public void start(Stage stage) {  
        text=new Text(10,50,"Non hai mai cliccato ");  
        Button btn = new Button();  
        btn.setText("Click me");  
        Listener1 a=new Listener();  
        btn.addEventHandler(ActionEvent.ACTION, a);  
        Group root = new Group(btn);  
        root.getChildren().add(text);  
        Scene scene = new Scene(root);  
        stage.setScene(scene);  
        stage.show();  
    }  
    class Listener  
        implements EventHandler{  
            int counter=0;  
            public void handle(Event t) {  
                updateText(++counter);  
            }  
        }  
}
```

```
public void updateText(int n){  
    text.setText("Hai cliccato"  
                +n+" volte");  
}  
public static void main(  
    String[] args) {  
    Application.launch(args);  
}}
```

Listener Interno Anonimo

```
public class AppWithEvents1 extends Application {  
    Text text=null;  
    public void start(Stage stage) {  
        text=new Text(10,50,"Non hai mai cliccato ");  
        Button btn = new Button();  
        btn.setText("Click me");  
        EventHandler a=new EventHandler(){  
            int counter=0;  
            public void handle(Event t) {  
                updateText(++counter);  
            }};  
        btn.addEventHandler(ActionEvent.ACTION, a);  
        Group root = new Group(btn);  
        root.getChildren().add(text);  
        Scene scene = new Scene(root);  
        stage.setScene(scene);  
        stage.show();  
    }  
  
    public void updateText(int n){  
        text.setText("Hai cliccato"  
                    +n+" volte");  
    }  
    public static void main(  
        String[] args) {  
        Application.launch(args);  
    }  
}
```

Self Listener

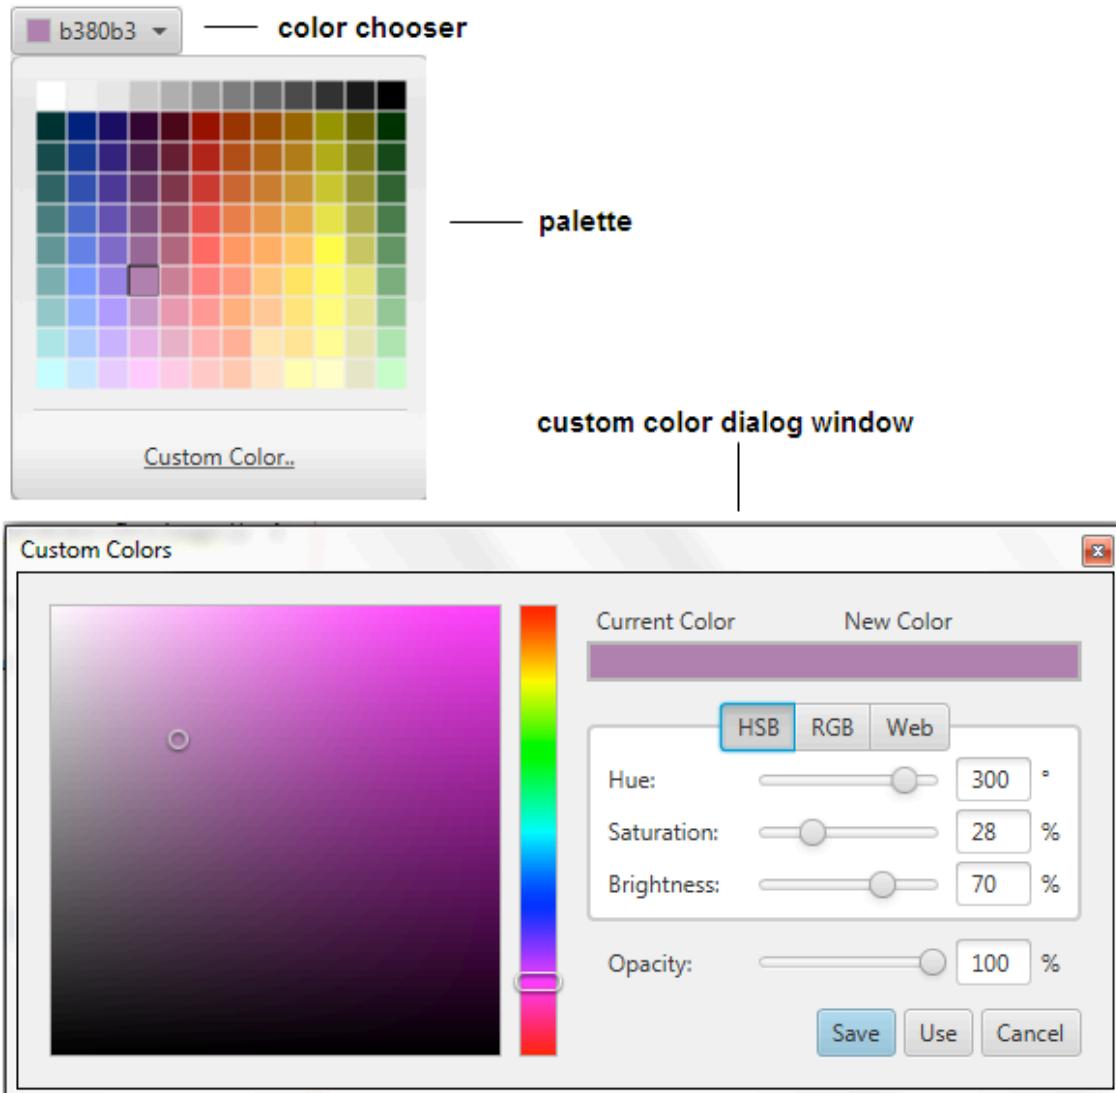

```
public class AppWithEvents
    extends Application implements EventHandler {
    Text text=null;
    int counter=0;
    public void start(Stage stage) {
        text=new Text(10,50,"Non hai mai cliccato ");
        Button btn = new Button();
        btn.setText("Click me");
        btn.addEventHandler(ActionEvent.ACTION, this);
        Group root = new Group(btn);
        root.getChildren().add(text);
        Scene scene = new Scene(root);
        stage.setScene(scene);
        stage.show();
    }
    public void handle(Event t) {
        updateText(++counter);
    }
}
public void updateText(int n){
    text.setText("Hai cliccato"
                +n+" volte");
}
public static void main(
    String[] args) {
    Application.launch(args);
}
```

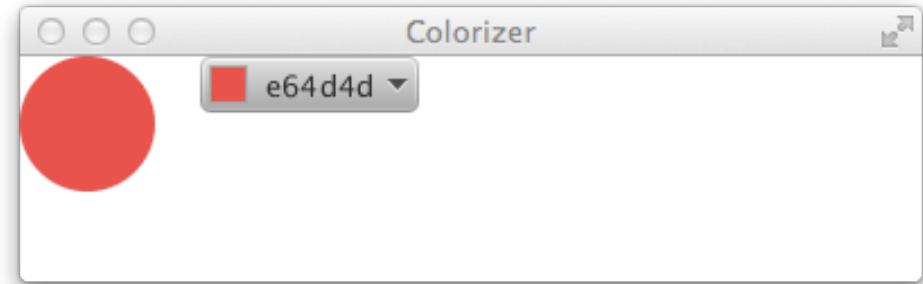

Due questioni:

- ColorPicker
- Convenience Methods

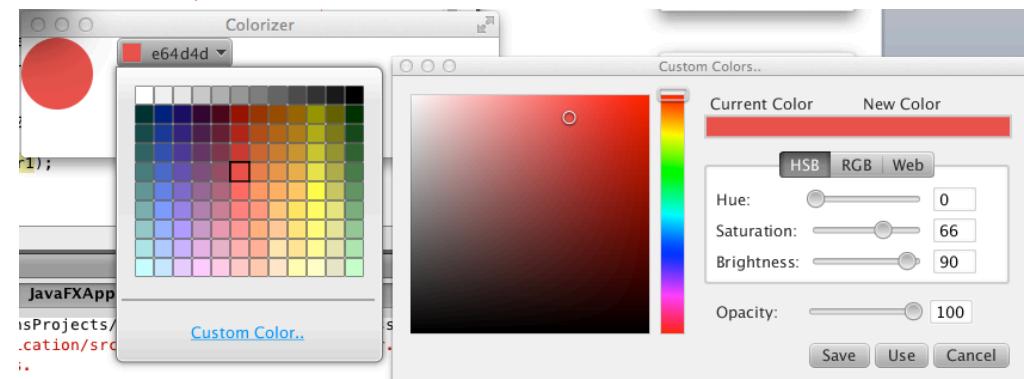

ColorPicker

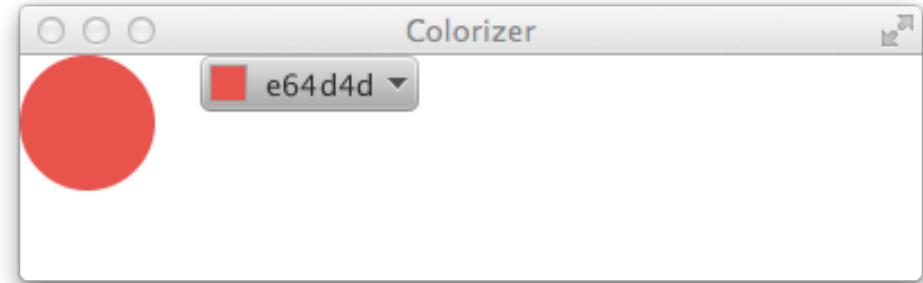

ColorPicker

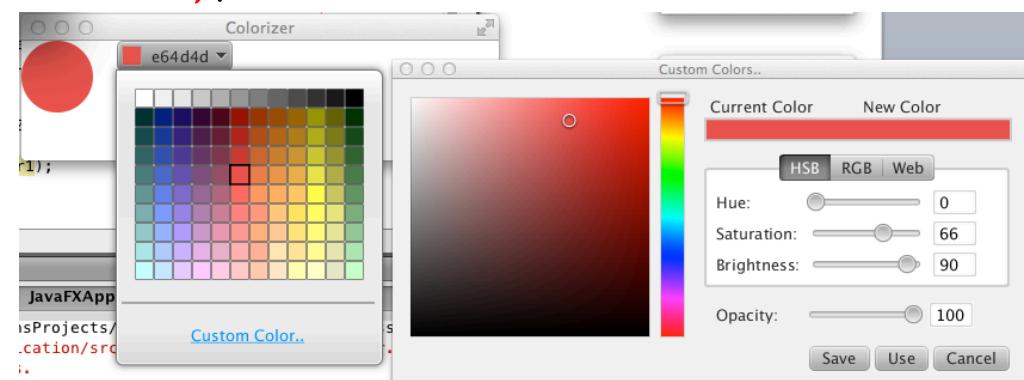

```
public class Colorizer extends Application {  
    public void start(final Stage stage) {  
        final Circle circ = new Circle(40, 40, 30);  
        final ColorPicker colorPicker1 = new ColorPicker(Color.BLACK);  
  
        colorPicker1.setOnAction(ActionEvent.ACTION, new EventHandler() {  
            @Override  
            public void handle(Event t) {  
                System.out.println(t.getEventType());  
                circ.setFill(colorPicker1.getValue());  
            }  
        });  
        Scene scene = new Scene(new HBox(20), 400, 100);  
        HBox box = (HBox) scene.getRoot();  
        box.getChildren().addAll(circ, colorPicker1);  
        stage.setScene(scene);  
        stage.show();  
    }  
    ...  
}
```

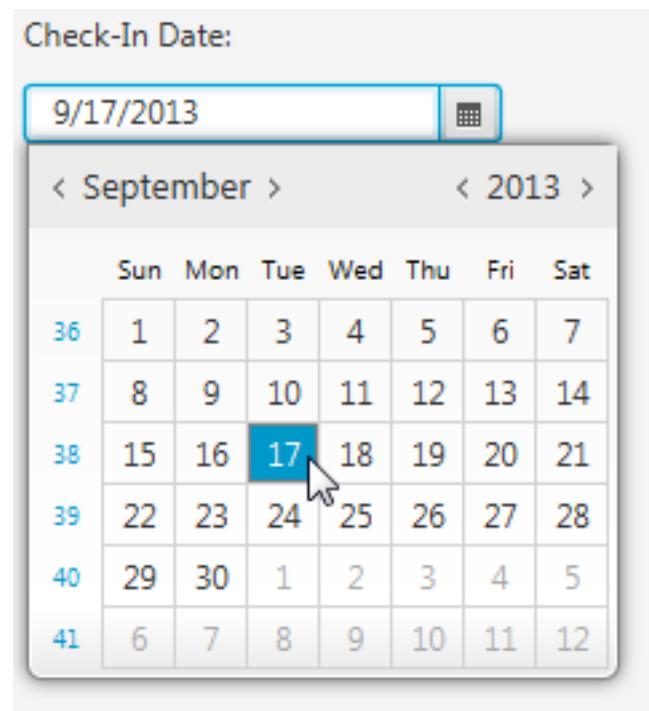

Convenience Methods

```
public class Colorizer extends Application {  
    public void start(final Stage stage) {  
        final Circle circ = new Circle(40, 40, 30);  
        final ColorPicker colorPicker1 = new ColorPicker(Color.BLACK);  
        colorPicker1.setOnAction(new EventHandler(){  
            // colorPicker1.addEventHandler(ActionEvent.ACTION, new EventHandler(){  
                @Override  
                public void handle(Event t) {  
                    System.out.println(t.getEventType());  
                    circ.setFill(colorPicker1.getValue());  
                }  
            });  
        Scene scene = new Scene(new HBox(20), 400, 100);  
        HBox box = (HBox) scene.getRoot();  
        box.getChildren().addAll(circ,colorPicker1);  
        stage.setScene(scene);  
        stage.show();  
    }  
    ...  
}
```

DatePicker

<http://docs.oracle.com/javase/8/javafx/user-interface-tutorial/date-picker.htm#CCHHJBEA>
