Wikis etc.

Wiki

A wiki is a web application which allows people to add, modify, or delete content in collaboration with others.

In a typical wiki, text is written using a simplified markup language (known as "wiki markup") or a rich-text editor.

While a wiki is a type of content management system, it differs from a blog or most other such systems in that the content is created without any defined owner or leader, and wikis have little implicit structure, allowing structure to emerge according to the needs of the users.

Vandalism and hoaxes

https://en.wikipedia.org/wiki/
Wikipedia:List_of_hoaxes_on_Wikipedia

"Our vandalism rate is very low," said one senior editor, who wished to remain anonymous for privacy reasons. "It didn't used to be, but it is very very low ... because we have people watching."

Quick overview of wiki markup

- '''three apostrophes''' will make text **bold**
- ''two apostrophes''' will make text *italic*
- [[Text in double square brackets]] will be <u>links</u> to the page named as the text in the brackets
- [[Link target|link text]] will display a link that looks like <u>link text </u>but links to link target
- The wiki is case sensitve – but not on the first letter of a link
- The wiki is Unicode

Basic mediawiki markup

What it looks like

You can *italicize text* by putting 2 apostrophes on each side.

3 apostrophes will embolden **the text**.

5 apostrophes will embolden and italicize ***the text***.

(4 apostrophes don't do anything special -- there's just '**one left over**'.)

You should "sign" your comments on talk pages:

- Three tildes give your user name: Example (talk)
- Four tildes give your user name plus date/time: Example (talk) 07:46, 27 November 2005 (UTC)
- Five tildes give the date/time alone: 07:46, 27 November 2005 (UTC)

What you type

```
You can ''italicize text'' by putting 2
apostrophes on each side.

3 apostrophes will embolden '''the
text'''.

5 apostrophes will embolden and italicize
'''''the text'''''.

(4 apostrophes don't do anything special
-- there's just ''''one left over''''.)

You should "sign" your comments  on talk
pages:
* Three tildes give your user name: ~~~
* Four tildes give your user  name plus
date/time: ~~~~
* Five tildes give the  date/time alone:
~~~~~
```

Headings

Section headings

What you type

Section headings

Headings organize your writing into sections. The Wiki software can automatically generate a [table of contents](#) from them.

Subsection

Using more equals signs creates a subsection.

A smaller subsection

Don't skip levels, like from two to four equals signs.

Start with 2 equals signs not 1 because 1 creates H1 tags which should be reserved for page title.

```

=== Subsection ===
Using more equals signs creates a
subsection.

 ==== A smaller subsection ====
Don't skip levels,  like from two to four
equals signs.

Start with 2 equals signs not 1  because
1 creates H1 tags which should be reserved
for page title.
```

Lists

Lists and indents

What it looks like	What you type

• *Unordered [lists](#)* are easy to do:
　○ Start every line with a star.
　　▪ More stars indicate a deeper level.
• Previous item continues.
　○ A new line
• in a list
 	
marks the end of the list.
 	
　• Of course you can start again.
 	
　1. *Numbered lists* are:
　　1. Very organized
　　2. Easy to follow
　2. Previous item continues
 	
A new line marks the end of the list.
 	
　1. New numbering starts with 1.
	`* ''Unordered lists'' are easy to do:`
	`** Start every line with a star.`
	`*** More stars indicate a deeper level.`
	`* Previous item continues.`
	`** A new line`
	`* in a list`
	
	`marks the end of the list.`
	`* Of course you can start again.`
	
	`# ''Numbered lists'' are:`
	`## Very organized`
	`## Easy to follow # Previous item continues A new line marks the end of the list.`
	`# New numbering starts with 1.`

Indents

A colon (:) indents a line or paragraph.

A newline starts a new paragraph. Often used for discussion on [talk pages](#).

We use 1 colon to indent once.

We use 2 colons to indent twice.

3 colons to indent 3 times, and so on.

```
: A colon (:) indents a line or paragraph.

A newline starts a new paragraph. <br> Often
used for discussion on talk pages.
: We use 1 colon to indent once.
:: We use 2 colons to indent twice.
::: 3 colons to indent 3 times, and so on.
```

Links

Links

| What it looks like	What you type
Here's a link to the <u>Main page</u>.	Here's a link to the [[Main page]].
But be careful - capitalization counts!	
<u>Intentionally permanent red link</u> is a page that doesn't exist yet. You could create it by clicking on the link.	[[Intentionally permanent red link]] is a page that doesn't exist yet. You could create it by clicking on the link.
You can link to a page section by placing a "#" before its title:	You can link to a page section by its title: * [[Help:Contents#For editors]]. If multiple sections have the same title, add a number. [[#Example section 3]] goes to the third section named "Example section".
• <u>Help:Contents#For editors</u>.	
If multiple sections have the same title, add a number. <u>#Example section 3</u> goes to the third section named "Example section".
